EDUCATION

University of California, Los Angeles

Bachelor of Science in Computer Science

Los Angeles, CA

Expected Jun 2027

- Cumulative GPA: 3.86/4.00
- Relevant Coursework: Algorithms, Data Structures, Java Programming, Assembly, Software Construction

EXPERIENCE

Full Stack Software Engineer

Jun 2026 – Aug 2026

GoLinks

San Jose, CA

- Independently built the GoProfiles MCP server from the ground up, increasing app usage by **~12%**; deployed via **AWS ECS** with custom task and security group configuration
- Reworked **Stripe** webhooks for real-time billing sync and redesigned key UI surfaces (e.g., collapsible sidebar) in collaboration with the design team
- Architected backend routing for connectors across the product suite and shipped a rewards/usage reporting system for internal audit, exposed via spreadsheet export and **Metabase**
- Diagnosed and fixed longstanding logic bugs affecting **100K+ users**, working directly with stakeholders to prioritize and validate fixes

Physics Group Tutor (Independent)

Feb 2024 – Jun 2025

El Camino College

Torrance, CA

- Facilitated biweekly group tutoring sessions from introductory through modern physics for **50+ students**, developing customized instructional materials and live problem-solving workshops
- Improved average exam performance by an estimated **10%** through structured practice and targeted guidance

PROJECTS

Vynel – Music Discovery App | *React Native, TypeScript, Expo*

Mar 2026

- Shipped a Tinder-style music discovery app enabling users to swipe through songs (**<16ms frame rendering**) using gesture-driven animated card stacks
- Implemented **OAuth 2.0 PKCE** with multi-layer token refresh and defensive error handling, ensuring stable sessions under asynchronous auth flows
- Designed a modular iTunes-to-Spotify resolution pipeline with **normalized matching logic**, ensuring consistent playlist state across asynchronous API calls

MLB Pitch Predictor | *Python, React, Node.js*

Sep 2025

- Developed a modular, object-oriented ML pipeline in Python to analyze **12M+** MLB pitch records, achieving **~75% accuracy** via stratified cross-validation
- Engineered reusable preprocessing and feature extraction modules with a pluggable model interface, enabling systematic comparison across ML algorithms and improving accuracy by **~15% over baseline**
- Created a full-stack **React/Node** web app delivering **sub-second queries** over millions of pitch records

TreeRequisites | *React, TypeScript, Go, PostgreSQL*

Dec 2025 – Present

- Built an interactive prerequisite visualization platform in a team of 5 using React (TypeScript) and a hexagonal grid graph interface, reducing render latency by **~80%** through optimized state updates and efficient component re-renders
- Ensure students see accurate, up-to-date prerequisite chains using **React Query, Axios, and Zod**, cutting client-side data inconsistencies by **~70%** and eliminating silent async failures that could mislead course planning
- Engineered a concurrent web scraping pipeline to populate course/prerequisite data into a Go (standard library) + PostgreSQL backend on **Oracle Cloud**, cutting failed requests by **~40%** under concurrent load

ACTIVITIES

ChessGPT – ACM AI at UCLA

Oct 2025 – Jan 2026

Member

Los Angeles, CA

- Collaborated with a team of **5+ engineers** to design and train a transformer-based LLM for chess move prediction and strategic analysis across **100k+ games**
- Developed evaluation tooling to compare model-generated moves against engine baselines (e.g., Stockfish) and human play, quantifying performance via top-k move agreement and Elo-correlated accuracy metrics

TECHNICAL SKILLS

Languages: Python, PHP, JavaScript, TypeScript, Java, Swift, C++, SQL, HTML/CSS

Frameworks & Libraries: React, Node.js, PyTorch, Scikit-learn

Developer Tools: Git, AWS (ECS), MongoDB, Linux

Certifications: Google Data Analytics Certificate, Supervised ML (Regression & Classification)
